

Jordan Rivera

Full-Stack & Machine Learning Developer

jordan.rivera.dev@example.com | example.dev/jordan-rivera | github.com/jordanrivera-example | Remote / Available for contract work

Summary

Full-stack developer with six years of experience building and deploying data-driven web applications. Comfortable owning a project end to end: FastAPI or Django backends, React frontends, machine learning models for classification and scoring, and Docker-based deployment to cloud infrastructure. Recent focus areas include retrieval-augmented AI features, REST API design, and PostgreSQL-backed data pipelines.

Skills

Languages & frameworks: Python, JavaScript/TypeScript, FastAPI, Django, React, Node.js

Machine learning: scikit-learn, pandas, model evaluation, feature engineering, recommendation and scoring systems

Data & APIs: PostgreSQL, SQLite, REST API design, SQLAlchemy, semantic search

Infrastructure: Docker, Docker Compose, GitHub Actions CI/CD, AWS (EC2, S3, RDS), basic Kubernetes

Other: pytest, Git, Streamlit for internal tools

Experience

Senior Full-Stack Developer, Contract — Brightwell Software Studio

Jan 2023 – Present, Remote

- Built a FastAPI backend and React frontend for a sales lead analysis tool, using Python, PostgreSQL, and Docker for deployment.
- Implemented semantic search over a document store and automated lead scoring using a scikit-learn classifier, cutting manual lead review time by roughly 40%.
- Set up CI/CD with GitHub Actions and deployed the service to AWS behind Docker Compose.

Backend Developer — Fieldstone Health Technologies

Mar 2021 – Dec 2022, Remote

- Developed REST APIs in Django and FastAPI for a patient-scheduling platform serving small healthcare clinics.
- Migrated a legacy MySQL database to PostgreSQL with zero downtime, and containerized the whole stack with Docker for consistent staging and production environments.
- Built internal dashboards in React for clinic staff to review appointment and no-show data.

Software Engineer — Northline Retail Analytics

Jun 2019 – Feb 2021, Remote

- Built ETL pipelines in Python to process daily e-commerce transaction data into a PostgreSQL warehouse.
- Trained and deployed a gradient boosting model to predict customer churn, exposed via a small Flask API consumed by the customer success team.

Education

B.S. in Computer Science, Riverton State University, 2019
